

BASIC iOS

ENGR 201

June 12 – June 16

3:00 – 4:15 pm

WELCOME

Welcome to Basic iOS. Technology is constantly evolving. One of these dramatic evolving technologies is mobile technology, whether it be a tablet or smartphone. In this class we will be specifically talking about Apple's iPhone and iPad. We will go over some basics of iOS.

NOTE: Since all technology has a shelf life not all features will be available on all devices. The older the device, less features will be available. It is recommended that you have either an iPhone 4s or above and/or iPad 2 or above.

What you should do before class:

There are a few things that will be helpful to you and to me before you come into class.

1. Make sure you are connected to the internet at the University. You do this by connecting to Bluezone, and going to bluezone.usu.edu and following the steps there. If you need help connecting to the internet, you can get help from the YETC or the IT Service Desk
2. Make sure that you know your Apple ID and Password. You might use it frequently during the class.
3. Friday will be a class choice day. The earlier you let me know what you would like to learn the more time I will have to prepare.
4. Come prepared to learn.

Rules:

1. Turn your phone on silent. We all will need to have our phones out, but they should not be distracting to others who are learning.
2. Be courteous of everyone around you, and do not speak out of turn. It distracts others from getting the most they can out of the class time.
